

AN OUT OF THIS WORLD EXPERIENCE!

The Spin Zone Experience will add a new and exciting attraction to your operation that is packaged for broad appeal using limited space and at a price that makes sense in any economy.

No "costly electric floor" needed. Spin Zone Bumper Cars run on Wood, Concrete, Asphalt or even Ice!

Requiring only 600 to 1,200 sq. ft., customized to fit your floor space and operational needs, and at a surprisingly lower cost point.....Spin Zone is "The Next Great Bump" for your business.

Amusement Product's extensive research and experience has led them to an attraction that can run up to 16 hours between charges and is very low on maintenance. With its proprietary radio control system, the cars, safety announcement, music and lights are started and stopped by remote control making for easy, safe operation... The Future Is Now!

Amusement Products has over 50 years of experience building the highest quality attractions and are the "Electric Experts!" We have extensive experience with electric motors from our patented pitching machines (over 30 years) to our electric go karts (9 years). It is this expertise that has allowed us to integrate the sound, light, timing and control into one unique package with the Spin Zone Bumper Car system. To finish off the attraction, we now custom make large format digital backdrops that can be custom sized to fit your walls and heavy duty powder coated steel handrails.

The Spin Zone Bumper Car Experience may very well be the most marketable addition to the FEC industry ever!

If you are looking for an inexpensive indoor (or outdoor) ride to add to your park or project, Spin Zone Electric Bumper Cars is the answer.
